🏆 Top 15 Finalist — Google Agentic Premier League (Multicity), 2026

PROFESSIONAL SUMMARY

Software engineer with production experience in cloud infrastructure automation, Python backend development, and agentic AI systems. Built GCP event-driven pipelines with Terraform and Pub/Sub at HST Global; built a real-time AI ops platform (Top 15, Google Agentic Premier League) using FastAPI + Groq LLaMA 3. Transitioning toward backend and data engineering.

EXPERIENCE

Software Developer Intern — HST Global

Dec 2024 – Present · Bengaluru

- Automated GCP IAM role provisioning with Terraform — eliminating manual access-control operations; changes applied via IaC, not console clicks
- Designed and implemented an event-driven pipeline using GCP Cloud Functions + Pub/Sub, triggering automated workflow execution on cloud events
- Built Cypress E2E test suites covering critical web application flows, replacing entirely manual QA and reducing regression cycle time

Mobile Application Developer — Clowak Innovations

May 2023 – Nov 2023

- Built an auto-rickshaw ride-booking Flutter app connecting students with drivers within a 15 km radius; integrated UPI payment gateway

Mobile Application Developer — Valsco Technologies

Jun 2023 – Nov 2023

- Developed lawyer directory and case management app with secure document upload for legal case files

PROJECTS

StadiumOPS — AI Stadium Operations Platform

May 2026

Top 15 / Google Agentic Premier League (National Multicity Hackathon) · FastAPI · Python · Groq (LLaMA 3) · React 18 · TypeScript · TailwindCSS

- Built a real-time AI command platform for crowd coordination and emergency response at IPL-scale cricket venues (60,000+ capacity)
- Designed FastAPI backend processing live operational state and calling Groq/LLaMA 3 to return structured JSON recommendations — all validated via Pydantic models
- Engineered a deterministic fallback rules engine that activates automatically when AI inference is unavailable — operational output is maintained even during API downtime
- Architecture decision: polling (4s interval) over WebSockets — chosen for reliability in high-stakes demo conditions; backend is stateless and Cloud Run ready

DeepTruth — Deepfake Video Detection

Jun – Dec 2023

Python · TensorFlow · CNN · LSTM · Transfer Learning

- Designed two-stage detection pipeline: ResNet CNN for spatial feature extraction → LSTM for temporal pattern analysis; achieved 97.76% accuracy on evaluation dataset
- Applied transfer learning on curated real + AI-generated video dataset with preprocessing pipeline (frame extraction, normalisation, augmentation)

Dynamic Pricing System — ML Optimization Engine

Dec 2023 – Apr 2024

Python · Neural Networks · Particle Swarm Optimization · Pandas

- Combined neural network demand prediction (92% test accuracy) with PSO for price point selection — PSO chosen over gradient descent for non-convex objective functions
- Built feature engineering pipeline processing competitor pricing, inventory, and temporal signals

- Built MCP server exposing Dev.to publishing as a callable tool for MCP-compatible AI clients (Claude Desktop, Continue)
- Built RAG pipeline for document ingestion and natural language Q&A over custom knowledge bases using LangChain

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, Java
Backend	FastAPI, REST APIs, GCP Cloud Functions, Node.js
Cloud/DevOps	GCP (Pub/Sub, IAM, Cloud Run), AWS, Terraform, Docker
Data	Pandas, PySpark, SQL (MySQL, PostgreSQL), Power BI
AI / ML	Groq, LLaMA 3, LangChain, TensorFlow, PyTorch, scikit-learn
Frontend	React 18, Next.js, TailwindCSS
Testing	Cypress (E2E)

EDUCATION

M.Tech Integrated — Computer Science Engineering with Data Science

VIT Vellore · CGPA: 7.95

2020 – 2025

CERTIFICATIONS

- Kaggle Gen AI Intensive
- Microsoft Certified: Security, Compliance & Identity Fundamentals
